

# Street Light Pollution Solutions

**Street Light Pollution Solutions** - Blue-rich light not only increases the amount of glare sensed by the human eye but also the amount of visible light pollution. Other effects of light trespass and glare include sleeping problems and even an increased risk for certain cancers. We humans need the night more than we know. New streetlight design curbs light pollution. The research team proposes a new LED street lamp design based on a three-part lighting fixture, with the first part containing a cluster of high-efficiency LEDs. These use Total Internal Reflection (TIR) lenses, which focuses the light into parallel rays. Each of us can implement practical solutions to combat light pollution locally, nationally and internationally. You Can Help! The good news is that light pollution, unlike many other forms of pollution, is reversible and each one of us can make a difference! Just being aware that light pollution is a problem is not enough; the need is for action. 15 Impressive Ways to Reduce Light Pollution. 6. The development and advancement of better alternative to cruises, light houses and ships. In the marine world, light houses are used for navigation purposes for boats, cruises and ships. The drawback is that the light houses emit very powerful lights that cause light pollution in the marine world,...
